

Bicycle Service Menu January 2017

Safety Check and Inspection:

Bring your bike in for a free safety check and inspection any time. We will alert you of any visible safety problems and give you a free estimate for any repairs we think are necessary.

Free

Standard Tune Up:

A bike tune-up is a complete inspection, adjustment, and lubrication of your bicycle. We adjust gears and brakes, true wheels, adjust the headset, bottom bracket, and hub cones and check all nuts and bolts during a tune up. We will also lube your bike as needed. During a tune-up, we perform all repairs and adjustments necessary to put your bike into the best shape it can be in for safe and reliable operation. Parts are not included. Labor is included for cable and housing replacement as well as replacement of most wear parts including brake pads. Labor is not included for overhauls of bearing assemblies (hub bearings, bottom bracket, headset) or overhauls of forks or shocks. We recommend tune-ups once a year at a minimum for all bikes.

\$59.95

Major Tune Up:

A standard tune up that includes thorough cleaning and reassembly of bearing assemblies. Assemblies include Headset, Bottom Bracket, and Front and Rear Hubs.

94.95

Drivetrain Overhaul:

A drivetrain overhaul includes complete disassembly, removal, and cleaning of drivetrain parts including, bottom bracket, crank arms and chainrings, front derailleur, rear derailleur, chain, and cassette or freewheel. All parts are then reassembled and torqued to factory specifications. A complete drivetrain overhaul is recommended annually under moderate use conditions. We suggest you consider a drivetrain overhaul when you show your bike some love with an annual tune-up.

\$49

Complete Overhaul:

An overhaul is a complete reconditioning of your bicycle. During an overhaul, we completely disassemble your entire bike in detail. We hand clean all components, re-lube them, re-install them, and re-assemble your bicycle. Then we perform a complete tune-up. An overhaul gives a dirty, well ridden bicycle a new life and greatly reduces wear and tear on all of its components. During an overhaul, we perform all repairs necessary to put your bike into the best shape it can be in for safe and reliable operation. Parts are not included in the price. We recommend overhauls based on the condition of your bike. If you ride year round, or mountain bike in all conditions...an overhaul once a year will make your bike last longer!

\$185 and up

A La Carte:

Wheels

Tire or Tube Replacement	\$4.95
Tubular Tire Replacement (price includes cost of glue)	\$24.95
Hub Adjust	\$5.95
Front Hub Overhaul	\$14.95
